Tachyon Energy: Powerful Healing For Higher Consciousness and Radiant Health

Introduction

According to quantum physics, the material universe is nothing more than a very dense form of energy. Everything that exists in this universe, from the most subtle, refined realms of energetic structures, to the grossest, densest realms of matter, is aligned in an energy continuum.

Energy flows constantly from these highly refined subtle realms-starting from the causal or super causal world as it is referred to in Yoga teachings and moving down through the astral, etheric, electromagnetic levels and finally into the material realm of existence.

Everything that exists on Earth exists within its own Energetic Continuum, our bodies being a perfect example. In addition to the material, physical body that we perceive with our senses, we have several other layers of energetic bodies. Through all these layers of energy, an Energetic Continuum flows from the highest, most refined subtle bodies down to the material body.

The energy flowing through the Energetic Continuum comes from one source.

In India, it is called the Divine Mother. Christianity calls it the Holy Spirit, and in many modern, New Age spiritual teachings it is called Cosmic Energy. Modern physics calls it Zero-Point Energy or Free Energy.

At this point, it is important to understand that Zero-Point Energy should not be confused with a particular form of energy, such as etheric or astral energy. Zero-Point Energy is formless. It is the source of everything. All realms of the subtle energies are just parts of the Energetic Continuum.

Tachyon Energy is the very first energetic structure that emerges out of non-structured, formless Zero-Point Energy. Just like Zero-Point Energy, Tachyon is not limited to a certain frequency. Tachyon cannot be measured in the Hertzian frequency spectrum. It is not a certain type of energy. Rather, it includes all energies within itself. Its qualities are much like Zero-Point Energy, varying only in that it is a structured field.

In itself, Tachyon Energy has stored all the potential needed to create a perfect Energetic Continuum in every individualized form of life. Everything that transpires in the human body, for example, is already encoded within Tachyon Energy in perfect form. An excellent example of this is seen in the animal kingdom, where it has been observed that animals not influenced in any way by human beings live completely healthy lives.

For example, mammals have a life span that is up to seven times their growth period. For a human being, that would mean 140 years of perfectly healthy life. Of the 40,000 chronic and degenerative diseases known in human medicine, only a few are known to exist in wild animals! This is because wild animals do not have the ability to block the Energetic Continuum.

In Nature we find perfection and such is the character of Tachyon Energy. The information that Tachyon Energy contains is inherently perfect. The only thing we need for achieving health and balance in our lives is a freely flowing Energetic Continuum.

In other words, we need to become superconductors for Tachyon Energy by allowing it to flow through all the layers of our subtle bodies. As this

energy flows into our material cells, it completely organizes the entire metabolism in a perfectly balanced manner that is the way we are meant to function.

If any layer of the subtle body system is blocked, energy will not flow freely down into the next grosser level. From that level onward, there will be significant deficiencies of energy. Blockages in any of the subtle layers prevent Tachyon Energy from flowing freely into the material body. This is why so many diseases are co-influenced or co-created by blockages in subtle bodies. This also explains why our psychological state affects our physical body.

In fact, the emotional and mental bodies are so subtle they do not directly interfere with the physical body. Since the flow of life force information to organize our metabolism also has to flow through the mental and emotional bodies, there is an indirect influence when these bodies are blocked. Significant blockages eventually create physical disease.

This information is the basis for the creation of many different frequency oriented energy systems. We know of photon energy, crystal energy, magnets, orgone energy, light acupuncture, radionic devices, photon lights, electromagnetic and sound therapy, all of which are used as therapy.

Of course, all of these energy systems work well when they all have the potential ability to remove some blockages, to remove stagnant pockets where energy cannot flow freely in a certain layer of the subtle body system. However, energetic frequency therapies, in general, have two limits.

One is that all these energies are limited to a certain frequency, for example, between 16 and 32 mu-meters. This is a certain spectrum of the auric field of our subtle body layers, and provided we have blockages between 16 and 32 mu-meters, photon energy, if applied correctly, can help.

But what if our problem is not rooted in that spectrum of frequencies? What if our problem is mainly an energy blockage in the realm of 35 to 50 mu-meters? Of course, there might be some small benefit from applying photon energy, by indirect influence, but the problem will not be cleared. Photon energy then, is something that might help a little bit, but it will not really take care of the problem at its root.

So we know that, just like photon energy, all subtle energy systems that are used for therapies have this one big limit, they only work on their specific frequency. The other limit is that the effect of any particular frequency is determined by the nature of that frequency. Photon energy, orgone energy, or electromagnetic energy, for example, can help because each has certain characteristics that forcefully affect the human body to move into another direction. However, if we don't need this particular, specific frequency, such energies can also be harmful.

Orgone energy can heal, but orgone energy can also make you really sick. It requires knowledge and experience to use these subtle energy devices safely and correctly.

Tachyon energy is totally different from all of these. Tachyon energy is not a certain type of energy, but rather includes all energies in itself. Whatever goes wrong in our physical body or in the subtle bodies, can be corrected by applying specific information for that particular process. This is possible through Tachyon energy, for Tachyon energy is the gateway back to Zero Point energy. This is something that no frequency can do. All frequencies are just part of the whole, part of what is anchored in the Zero Point energy, but all frequencies are limited in their specific effects. Tachyon is totally non-specific. Tachyon really doesn't have any effect in and of itself.

What Tachyon does is give our organism, our body, our subtle bodies the chance to produce whatever effects they need. And since our bodies are incredibly intelligent, they always produce the effects that are good for

them. The two limits that we find confining all other forms of energetic medicine just don't apply to Tachyon because Tachyon energy is not limited to a certain frequency.

Another important difference between other subtle energy devices and the energy that they use and Tachyon energy is that Tachyon cannot be influenced in any way whatsoever by any other form of energy. All other forms of subtle energies that are used in energetic medicine can be influenced, for example, by one's own thoughts and feelings. This is due to the fact that below the speed of light energies have something that is called the gravitational pull, that makes energies attract each other so that they stick to each other.

This, of course, creates influence, changing and altering the energies in their specific effects. Tachyon moves beyond the speed of light so it has no gravitational pull so it cannot stick to anything or any energy, and no energy can stick to Tachyon. No matter how "bad" our thoughts are, how low our emotional content is, no matter what kind of negativity we produce in any form it can never alter Tachyon energy and its ability to give us access to the Zero Point energy.

So potentially, all problems we have- mental, emotional, spiritual, or physical- can be positively affected by Tachyon energy! Another wonderful aspect of using only the source energy is we do not have to deal with unwanted side effects. Even if we apply so much energy that parts of our organism want to have a very strong, very quick healing effect and other parts don't quite catch up, this won't be a problem. It sometimes causes detoxification and healing reactions, that for a very short time may feel overwhelming, but there will never be a negative outcome.

Tachyon energy is also free of that second limit. It doesn't require so much knowledge and experience to apply Tachyon correctly because the body is in charge of the process anyway. We do not forcefully apply it for a certain specific effect, but we rather let the body produce its own healing effects.

Tachyon energy is simply the natural catalyst for this self-healing process.

Tachyon Energy

Tachyon energy, most of us have heard the name, primarily from shows such as Star-Trek or other like shows. Some, with a background in the hard sciences, may have heard the term a few other times, but very few people know exactly what tachyon energy is, and even fewer know about the incredible results that can be attained through the its use in the area of alternative health-care or, as it is also known, holistic healing.

Inside these pages, it is my goal to introduce you to tachyon energy and its benefits. There is a great deal of information provided in these pages, I have tried to break it up into segments so it is not so overwhelming, but to fully understand the concept, it is necessary to read all of the information provided, so, if you are ready to learn about this remarkable energy, sit back relax, grab yourself something nice to drink, and open yourself up to this new way of seeing things. Tachyon Energy is a blessing, and through the incorporation of this energy into our lives, we can begin to bring about some very dramatic changes, not only in our health, but also in our whole way of being. Enjoy!

The Tachyon Era Has Begun

Through the search for Free Energy, science postulated, at first, and then indirectly proved Tachyon Energy.s existence. Today, we all envision its potential. Despite all opposition, the Tachyon era has begun. In 1977, Gerald Feinberg defined Tachyon Energy as a “faster-than-light, subatomic particle” in order to unify the scientific world.s view and nomenclature of faster-than-light energy.

We give thanks and acknowledge the various scientists, past and present, who have provided the foundation for this new era and have thus paved the way for the Tachyon revolution.

The problem is no longer in proving the existence of Tachyon Energy. The problem is in harnessing the Energy. Many distinguished scientists have worked in this field with mixed results. What these scientists were and are trying to accomplish is the conversion of Tachyon Energy into usable electrical energy.

David Wagner had a different vision of the benefits of Tachyon Energy. His vision was the clear realization that the conversion of Tachyon Energy into usable electrical energy would, in fact, not solve this planet's growing crisis, because it is not a crisis of energy. It is a crisis of consciousness.

Wagner recognized that everything evolves out of the Tachyon field and his breakthroughs in applied physics are directly responsible for the Tachyonization process. Tachyonization restructures certain natural materials at the submolecular level, creating a permanent Tachyon antennae.

His ability to harness Tachyon Energy, and the scientific world's ability to prove the outcome, are directly responsible for the Tachyon revolution that is taking place in over 55 countries. The Tachyonization breakthrough harnesses the infinite potential of Tachyon Energy in ways that benefit life on Earth and aid in elevating consciousness.

From invention of the Tachyonization process, Wagner recognized his responsibility to increase global awareness of Tachyon energy. He developed the Quality of One seminar and began changing the way hundreds of thousands of people view and experience life. To fully understand this revolution, it is helpful to understand Tachyon's relevance, first in science and quantum physics, then in holistic healing.

The Tachyonization process developed by Wagner is 100% patentable. However, after much deliberation, the decision was made to keep the process proprietary. Wagner speculates that this decision has saved

millions of dollars in patent infringement lawsuits. Consequently, it has also assisted in keeping the cost of goods as low as possible. Furthermore, except for gold jewelry (due to its price fluctuation), Advanced Tachyon Technologies has never raised the prices of its Tachyonized tools.

There is a limit to what can be discussed about the technology because the process is proprietary. Not everyone's desire for full understanding of the Tachyonization process will be satisfied. Although we can't disclose how the Tachyonization process functions, how it does not function can be shared.

The Tachyonization process:

is not a frequency, spin or manipulation

does not use sound

is not a radionics or SE% transfer

does not use sacred geometry to inform products

is not a photon-based technology

does not use crystals or orgon technologies

does not use magnets

is absolutely NOT operator sensitive

The use of Tachyonized products normally result in a natural detoxification, increased absorption of available vitamins and minerals, increased energy for physical activities, increased awareness of subtle energies, increased brain function, increased circulation, and exceptional improvements in athletic abilities and muscle recovery. When athletes use these products they notice a significant decrease in fatigue, allowing increased performance. To understand how Tachyon works, we must begin by exploring the secrets of the universe and its very nature.

The Physics of Tachyon

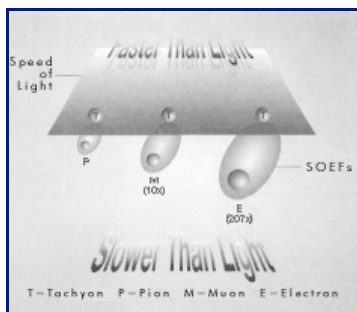

In quantum physics, the energy that fills the cosmos is called "Zero-Point Energy." Formless, faster than the speed of light, and omnipresent, Zero-

Point Energy is infinitely intelligent and contains everything needed to create perfect form. It has no spin, frequency or oscillation. It has no gravitational pull. Tachyon Energy is omnipresent, limitless and has all the potential information to create perfect form in the universe.

Just like Zero-Point Energy, Tachyon Energy has no spin, oscillation or frequency and is not affected by gravity. The real difference between Tachyon Energy and zero-Point Energy is that Tachyon Energy has form. A simple analogy can be seen if one thinks of the ocean in all its vastness. The ocean contains an infinite number of droplets within it; yet like Zero-Point energy, it is formless. If you were to remove one drop from the ocean, that drop would still contain everything within the ocean, but now it has form. Likewise, Tachyon Energy contains everything that exists within Zero-Point Energy, but now it has form.

The condensation of Zero-Point Energy into Tachyon energy is the beginning of the “Energetic Continuum,” which is directly responsible for all forms on the planet. The next step in this Energetic Continuum is best explained in simplified terms of physics.

For this explanation we will explore the interaction of Tachyon energy with the “Lepton Family of Particles.”

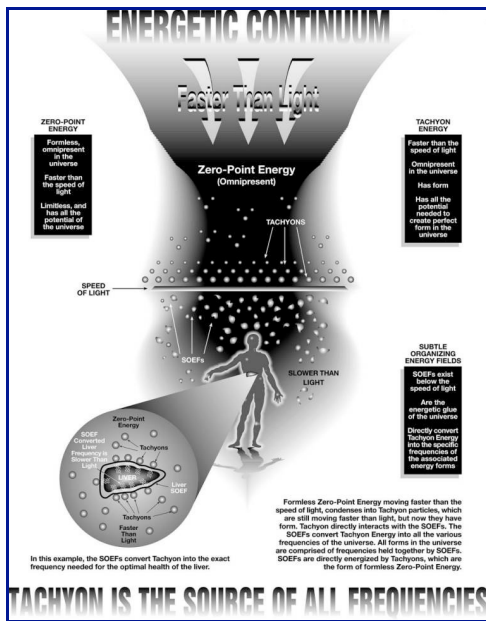

The first elementary particle in the Lepton Family is a pion. The pion exists below the speed of light and has a consistent, mathematically computable orbit. We call this orbit a “Subtle Organizing Energy Field” or SOEF for short. SOEFs exist just below the speed of light and are directly

responsible for converting Tachyon Energy into the frequencies required to evolve, organize and create perfect form. All forms are comprised of different frequencies.

The SOEFs convert Tachyon Energy into the particular frequencies needed by a particular form. In this case, the SOEF we're discussing holds the pion in its orbit. The pion's SOEF, existing just below the speed of light, interacts with faster-than-light Tachyon. As the Tachyon Energy is converted into the pion's frequency by the SOEF, the pion evolves in an instant into a muon. The new muon has an orbit, which is 10 times larger than that of a pion. The muon's SOEF still exists just below the speed of light. As the SOEF of the muon interacts with Tachyon, the orbit once again expands, and the muon evolves in an instant into an electron. This new electron has an orbit that is 207 times larger than the muon's. This continual process of SOEFs converting Tachyon into the needed frequencies does not stop here, of course.

This process continues all the way down through the Energetic Continuum. Ultimately, the process continues until the perfect form is reached; whether it be a human being or any other form known to exist. Tachyon Energy is the binding energy of the universe. It is responsible for the creation of all forms on the planet. Most importantly, Tachyon Energy is the key element in the flow of energy from the infinitely formless all the way down to the perfect form. This is the Energetic Continuum.

As with all forms in our slower-than-light universe, SOEFs cannot exceed the speed of light. This is a very important point. Our world is a world of form; therefore, the only way for a world of form to interface with formless Zero-Point Energy is through Tachyon.

Tachyon Energy, in itself, has stored all the information needed to create a perfect Energetic Continuum in every individual form of life. Everything that transpires in the human body, for example, already exists within Tachyon in perfect form. An excellent example of this is seen in the animal kingdom. It has been observed that animals which are not influenced in any way by human beings live completely healthy lives. Mammals, for example, have a life span that is up to ten times their growth period. For a human being. That would mean 140 years of a perfectly healthy life. Of the 40,000 chronic and degenerative diseases known in human medicine, only a few are known to exist in wild animals! This is because wild animals do not have the ability to block the Energetic Continuum, thus creating deficiencies and diseases.

The Energetic Continuum is the continual flow of energy from unlimited Zero-point Energy contracting into its faster-than-light Tachyon form. Tachyon Energy then interacts with the SOEFs. Becoming energized, the SOEFs convert into whatever frequencies are needed to bring balance to

the being. This action ultimately creates the energetic matrix from which all physical forms are structured. The Energetic Continuum ranges from infinite, formless expansion to finite contraction of form.

Once we understand how this continuum exists and functions, we can understand the influence of blockages in the flow of energy down through the continuum.

From the holistic healing point of view, complete healing is an integration of the physical, emotional, mental and spiritual levels. Living beings evolve in a continuous upward spiral of order to chaos (and/or disease). The energy spiral continues through the chaos to higher levels of order. Chaos is a stepping stone from one level of order to the next higher level. Every living being experiences this process of energy flow whether or not they are aware of it.

Tachyon Energy is the key to moving through chaos and stress in our daily lives; creating new levels of order and quality of life. Tachyonized tools significantly contribute to achieving near-perfect energetic balance at all levels. The use of Tachyon not only presents a fully holistic model of healing, but a process by which all living beings can move towards radiant health and communion with All That Is.

A New Paradigm in Holistic Healing

Holistic health, harmony and healing of the body, the emotions, the mental and spiritual levels are all based on an energy source that is integral to our existence. Therefore, healing at any level is extremely dependent on tapping the primordial energy that is the source of existence. From maintenance and rejuvenation to the deepest levels of holistic healing, all are made possible by our ability to tap into the energy source that energizes and creates the form of all material existence as we know it.

In order to appreciate and truly understand the principles of healing with

Tachyon, it is helpful to briefly review the vibrational healing theories of holistic medicine. The vibrational approach includes such therapies as: orgon, magnetic field, radionics, bioresonance, photon energy, homeopathy, healing work with sacred geometry, crystals, color, flower and gem elixirs, sound and many more. Frequencies are further complicated by individualized oscillations and right or left spins. All these methods are based on one common principle: Within our Energetic continuum of subtle bodies, obstructions can manifest on any frequency level. These obstructions can then cause health problems.

Properly applied, the use of energies with specific frequencies can lead to excellent results if, in fact, one knows what frequency they are dealing with and how long to apply the frequency. Yet, all such methods have three significant drawbacks that are unavoidable:

The effects of energy with a specific frequency, as used in vibrational medicine, are limited to the range of that frequency. Photon energy, for example, is described as pockets of light energy. Scientists use this concept to refer to the particle-life aspects of light. Photons are always associated with an electromagnetic wave of a definite frequency. The frequency is between .4 and .64 micrometers. There currently is one frequency energy tool that emits photon energy from the far-infrared spectrum of .4 – .16 micrometers wavelength. This is a small electromagnetic wave of the total frequency possibility of photon energy.

This narrow frequency does correspond to a frequency in the energetic body. If there were a blockage in this narrow frequency range, then there would be a deficiency of energy between the blocked level and the physical body. But, what if the blockage lies between 18 to 35 micrometers: Applying this photon energy frequency might have some indirect influence, but it surely would not clear the blockage from, nor would it reconnect the system to, the Energetic continuum. One of the significant drawbacks to energetic medicine is the need to know exactly the frequency of the blockage in order to apply the right frequency treatment.

All subtle therapeutic methods other than Tachyon are only isolated frequencies of the whole. Accessing the complete spectrum of frequency and information to clear the entire system and restore total functionality of our Energetic Continuum is very rare and difficult using a single frequency approach, because people may have multiple blocks at different frequencies. Energies of a specific frequency can also have harmful effects. There are two basic reasons for this an excess of any frequency can potentially be just as harmful as an energy deficiency; since a frequency has no intelligence, it is left to the wisdom, insights, and training of the user to determine the actual exposure time and which specific frequency is needed.

For example, the sun is a magnificent source of photon energy. Approximately 20-30 minutes of exposure per day is necessary for optimum health. Yet, this same ball of photon energy will burn you to a crisp if you are exposed for 4 – 5 hours. The reason for this is that photon energy, like all frequencies, has no intelligence and doesn't know when to start or stop! So, it is up to the user to decide when to stop the exposure by getting out of the sun.

Another example is excess exposure to magnetic energy. For instance, it is known that magnets work on a specific frequency with the North and South Poles having opposite effects. The South Pole is activating. If it is used for too long, it can create hyper-activity in the system and cause harm. Dr. Gabriel Cousens, director of the Tree of Life Rejuvenation Center, demonstrated through clinical experience that some people using magnetic mattresses developed high blood pressure, which fortunately went away when they were told to stop using it. This can happen because magnets operate on a frequency and have intensity, but do not have a built-in intelligence to know when to stop broadcasting.

Tachyon Energy is totally different from both of these examples. Tachyon is not a frequency, nor is it a frequency approach. Frequency, oscillation or

spin do not exist at the level at which Tachyon operates. Its effects are regulated by the internal wisdom of the SOEFs. When Tachyon is applied to an area, SOEFs convert what they need to restore themselves to perfect balance and order. Tachyon does not heal, Rather, it provides the energy for the body to heal itself. These simple examples are meant to provide insight into the difficulties inherent in frequency-oriented medicines, as well as the mixed results obtained from using them.

Using Tachyon energy offers a huge advantage, because it reduces the possibility of unwanted side effects to zero. Therefore, we can honestly say that Tachyon Energy is something totally different and cannot be compared to any other form of energy medicine or subtle energy amplifiers.

Tachyon Energy is the link between form and formless and offers us the possibility of opening an exogate (a doorway between form and the formless) into All That Is.

Another wonderful aspect of using only source energy to bring balance to our beings is that we do not have to deal with unwanted side effects. Even if we apply so much energy that parts of our organism experience a very strong, very quick healing effect, and other parts don't quite catch up, it is not a problem. Tachyon Energy sometimes causes detoxification and healing reactions. For a very short time, one may feel overwhelmed, but there will never be a negative outcome. Tachyon Energy is also free of another limitation. It doesn't require a lot of knowledge and experience to apply it correctly because the body is in charge of the healing process. We do not forcefully apply it for a certain specific effect. We let the body produce its own healing results. Tachyon Energy is simply the natural catalyst for this self-healing process.

Joyous Life as a Super Conductor

Once upon a time, science and spirituality split; each following its own path towards the source of existence. Tachyon is a synergistic energy, merging the scientific and spiritual paths back into “oneness.” unfolding our spiritual potential, attaining harmony in all areas of life, and establishing radiant health are natural goals, Achievement of these goals is directly dependent upon how well our Subtle Organizing Energy Fields convert Tachyon Energy into all the various frequencies flowing through all the subtle levels of our being and then finally into our physical body. We do not have to turn ourselves into something we really are not. Instead, we can become “super conductors.” In science, a super conductor is a material that has no resistance to the flow of energy. What we must try to do in terms of achieving optimal health is create a spiritual, mental, emotional and physical body that is a super conductor. This means having no resistance to the flow of cosmic energy coming into our life through the Energetic Continuum.

From the spiritual side, we have to realize that we are co-creators in our state of health. If we do not create any blockages in the flow of energy going through our system, our spiritual potential can unfold. We are able to establish radiant health in our lives and consequently, higher levels of joy. As super conductors, we reach for a state of optimal health and the highest level of order in the process of “order-chaos-order-chaos-order.” This process is what happens when we clear blockages using Tachyon.. Each block we clear adds to the joy of the cosmic energy flowing through us. We can literally feel this happen. As we repeatedly experience it (and experience the Divine Energy consistently filling us with joy, peace and contentment), we begin to understand that we are part of the Divine Energy.

We have choices in our lives that we have to make. Do we choose to create a lifestyle, a diet, a way of being in the world that helps us become more of a super conductor? Or, do we choose to ignore the laws of nature and the

Divine – in essence creating more chaos, entropy and degeneration in our lives? How do we make these choices? Is it only a conscious choice or are there other factors taking place that influence this very critical life-enhancing or life-depleting decision? What determines whether we choose to become more of a super conductor or less of a super conductor for the Energetic Continuum? The answer lies in the moment of truth.

The Moment of Truth

In the chaos/order theory, there is a term called the bifurcation point. This is the point of overwhelm; the point or moment of truth in which the body either breaks down, i.e. manifests disease, or there is a movement towards better health; elevating the body to a higher level of order. In the past, how the body was going to react to this bifurcation point was always a mystery. Would it move towards order and health or spend an inordinate amount of time in chaos or disease?

Today, with the breakthrough of Tachyon energy, we have discovered a way to influence the direction a being's system will go. Tachyon balances and energizes the SOEFs affecting the being's entire system. At that moment of truth when a bifurcation point happens,, a gland, organ, or system can attune itself to a higher state of order, and evolve through the bifurcation point into a higher level of order. When an energetic system passes through a bifurcation point, and if the system's SOEFs are energized and balanced using Tachyon Energy, that energetic system will move toward health.

In 1990, David Wagner developed specialized tools and techniques that can cause a bifurcation of an energetic system during a treatment administered by a trained Tachyon Practitioner. With the advanced application of Tachyonized tools and reconnection of the being's system to the Energetic Continuum, the trained Practitioner is able to help the "body-mind-spirit" complex move towards a higher level of order and health. However, you don't have to be a trained Practitioner to experience

the life-enhancing benefits of Tachyon Energy. Anyone can begin benefitting from Tachyonized tools by simply applying Tachyon Energy to a localized area. Whatever frequency is needed is converted into biological energy by the SOEFs, so that the body may heal itself. Following is an actual example.

“Eight weeks ago, I sprained my ankle sustaining a sever injury including swelling, bruising and pain, incapacitating me from bearing weight on that ankle. An orthopedic surgeon who examined my foot suggested I have X-rays taken because of the amount of bruising present, which led him to believe I had fractured my ankle. The X-rays were negative. This type of injury would ordinarily take at least two to four weeks to completely and comfortably bear weight. After two days of using Tachyonized cells and a Tachyonized sports wrap, the swelling was completely gone, and I was able to hop up and down on the previously injured ankle totally pain free!”

Illness or disorder is a blockage in the flow of energy through the Energetic Continuum. A block in the emotional body, for example, would create an energy deficiency all the way down the continuum into the physical body. One may experience this deficiency as pain, possibly in the lower lumbar area. This back pain will continue to escalate as long as the block exists. It follows that this block is what needs to be cleared. The block is defined, in essence, as a disorder or chaos in the Energetic Continuum causing an energy deficiency. The blockage could be physical, emotional, mental or even spiritual. These blockages are directly responsible for the energy deficiency that create chaos, disorder and disease in the physical body. Tachyon Energy, being the source of energy that organizes and energizes SOEFs provides the potential to clear blockages restoring energetic balance. Tachyon energy creates an anti-entropy effect. It organizes that which is disorganized. Tachyon realigns and restores SOEFs to their natural state of order and balance, thus creating good health.

A wonderful example of Tachyon.s negative entropy (balancing) effect can

be demonstrated using two rose buds, cut from a bush. Rose "A" is placed into plain distilled water. Rose "B" is placed into pure Tachyonized™ Water. Rose "A" opens, the stem collapses, and the flower wilts after 2 = days. This represents the normal life expectancy of the variety of rose used in this experiment. The water for Rose "A" is then replaced with pure Tachyonized™ Water. As a result, the stem becomes erect and Rose "A" reopens for another three days. Meanwhile, rose "B", which has been sitting in the Tachyonized™ Water, opens and remains fresh for nine days without any signs of wilting. The Tachyonized™ Water charges the SOEFs of Rose "B," which actually slows the effects of the aging (positive entropy) process. Further observation of the stem of Rose "B" demonstrates quicker-than-normal root development. After eight more days, the stem was planted and a new rose bush was the outcome.

Research has proven the Tachyonization process. The possibilities for balancing our world are truly endless. As a company, we are devoted to providing you with the best tools possible. We also offer you the opportunity of having your personal articles and tools custom Tachyonized.

The world has now begun to embrace its future. Many companies from around the world, including the United States, Japan, Germany and England, are using our joint venture "Heal the Planet" program. This program allows the Tachyonization™ of other companies. products, or the use of Tachyonized specialty products in the manufacturing of new products that will help heal the planet. A good example is Vita-Pur™, a live enzyme drink derived from kombucha mushrooms specially grown in a custom-developed Tachyonized field. This European drink also contains Tachyonized™ Water. Another example is the Phone~Cell™, which was specifically developed in a joint venture with Japan and Germany to eliminate the negative effects of cellular phones. Through joint ventures, new products can be developed for correctly aligned companies. If you have an idea that would benefit the world, please contact us.

On a cosmic level, when we start looking at the whole energetic structure of the body, mind, spirit and emotional complex, attunement with Tachyon Energy enhances our connection with the Energetic Continuum at the highest level. Ultimately, attunement enhances our communion with the Divine. When we are attuned or aligned with Tachyon Energy in a particular way that makes the higher cosmic energies more accessible to us, we are more likely to make choices for healing when we reach the bifurcation point. Tachyon Energy has the potential to balance not only the micro levels of being, but also help restore the body, mind, and spirit alignment within the macro systems.

Shifting Consciousness

Most people exist in a fragmented, horizontal energy system. Becoming vertical in our energy flow is a way of accelerating our shift in consciousness. Through the use of a special Tachyonized tool called the “vortex pendant,” there is a way to shift into a vertical state. This allows many people to access the benefits of verticality. This is a boon to the spiritual seeker. When we’re vertical we feel more “connected,” and aligned with the cosmic process in our everyday lives. By learning how to use Tachyon Energy, we can learn to restructure our system back to its natural, vertical state. The beauty of the Quality of One™ workshop, created by David Wagner, is that one learns to work with the Tachyonized™ Vortex Pendant and various techniques that assist the verticalization process. This gives the seeker a real opportunity to integrate the wonderment of this higher dimensional alignment in a way that enhances and acts as a divine feedback system. This encourages one to continue and evolve on their spiritual path.

Tachyon Summary

Tachyonized materials are permanent antennae, that are able to focus Tachyon Energy. With Tachyon energy, the entire complex of subtle and physical levels of the Energetic Continuum can receive access to all

information needed for self-healing. For every energy obstruction, disharmony, energy deficiency, or lack of order in our body-mind-spirit complex, we can find the suitable solution through Tachyon Energy. Since the body-mind-spirit complex itself decides which effects it permits, the results of applying Tachyon Energy are always positive. It is possible to apply so much Tachyon to your energetic system that it begins a detoxification process. Remember, Tachyon energy creates order out of disorder, thus harmful results are not possible.

The evidence is clear that Tachyon is the technology of the future. It offers the potential to evolve through chaos into new levels of order. It will elevate our consciousness and give us back the balance needed to experience the insights necessary for creating peace. The truth is Tachyon cannot change the world, but we as individuals can. It's not too late. If each of us could find the place of love, peace and balance that Tachyon brings into our lives, we would change the world

Tachyon Field Theory

Tachyon, meaning swift particle, was the name given by Dr. Feinberg at M.I.T. to a theoretical particle which travels faster than the speed of light. According to modern physics, no particle can go faster than the speed of light. To entertain the notion of a faster-than-light particle, one must step into a theoretical world where time travels backward and objects have negative mass.

However far-fetched such a concept may seem, concrete evidence exists to back up the theory supporting Tachyons and a Tachyon Field. Electrons seem to appear from nowhere, and disappear into "nowhere". No one has been able to clearly identify a source for electrons that explains how they can be manufactured continuously out of "nowhere". Some possible electron precursors, like the decay of light photons, can only account for a very small number of the electrons which exist. This fact begs for explanation, and Tachyon theory supplies some very reasonable answers.

Since existence of a Tachyon Universe cannot be proven by instrumentation currently available, Tachyon theory is constructed by examining observable effects and drawing conclusions. Since Tachyon theory blurs the distinction between metaphysics (which deals with non-physical realities) and physics (which deals with physical realities), it has not been well-received by some main-stream physicists, even though concepts of negative mass, positrons (positive electrons) and other attributes which support Tachyon theory have been hypothesized and experimentally demonstrated. Though discredited by some physicists today, Tachyon theory persists, an artifact of theoretical physics that has yet to be replaced by a fully coherent and integrated alternative.

Tachyon theory states that the Tachyon universe continually creates, sustains and energizes the physical universe. Every created thing owes its existence to the expansion of the Tachyon Field. In this sense, it sounds like a religious description of the Creator, or the Creative Force.

The Tachyon Field is extremely dense. This density cannot be measured because it is a negative state, mirroring the universe of positive density which we inhabit. The theory of negative density is supported by an observable phenomenon: a perpetually expanding physical universe which is brought into being through pressure exerted by expansion of the invisible one. Pressure exerted by the Tachyon Field upon our physical universe indicates the existence of an invisible, highly dense universe, the Tachyon Field.

Yin/Yang theory of Oriental Metaphysics supports the concept of mirror universes. In Yin/Yang terms, all phenomena exist as dualities. For example, higher forms of life are created male and female. Atoms exist naturally as positively-charged protons surrounded by a whirling cloud of negatively-charged electrons. Even positive electrons require negatively-charged protons in the nucleus to balance and support their existence.

Some modern physicists accept the notion of mirror universes, which they call matter and anti-matter, but they claim a simultaneous confrontation of the two results in immediate annihilation of both. Though this may be indicated in laboratory tests involving highly excited states of matter, such extremely excited conditions only occur in stars in the natural universe.

Tachyon theory claims a gentler, perpetual flow of movement occurs between the material world and the Tachyon universe. As in a flowing stream of water, there are swirls of movement, as energy passes from one universe to the next and back again. Movement between material and immaterial, the transformation of energy into non-energy, occurs spontaneously, effortlessly and freely.

Tachyon theory is holistic because it accepts the notion of two interdependent universes which are actually indivisible: the visible, sub-light speed universe and an invisible, faster-than-light one. Tachyon theory also substantiates omnipresence, a purely metaphysical concept. The Creator is omnipresent (simultaneously existing everywhere). Omnipresent existence can only occur at faster-than-light speeds, since slower-than-light travel takes time to cross space. Therefore, omnipresence can only be an attribute of a Tachyon Universe where time and space collapse and no longer exist.

Tachyon energy is potentially omnipotent, yet actually harmless to biological organisms. The vacuum contained in an ordinary light bulb is said to contain enough Tachyon energy to boil all the oceans of the world. Yet life forms are continuously nourished by the Tachyon Field without harm as it materializes into the visible universe. The Tachyon Field supplies the energy needs of all living organisms until balance is achieved, then it eases until called upon again. As it is needed, and a depletion occurs, it rushes in until balance is achieved once again.

In Taoist thought, as well as Christian belief, The Tao (God) is considered the omnipotent force that gives life to all living things, and sustains the

Universe. One does not need to force change directly in the affairs of the world to correct them, unless one desires to be an instrument of change. Change occurs when the need becomes overwhelming, in nature as well as society.

Living forms developed and evolved by learning how to harness the Tachyon Field's resources, and we continue to evolve by developing more and more sophisticated ways of accessing these resources. The nervous system and brain are nothing but an extremely sophisticated antenna and receiver to absorb, process and transform the resources of the Tachyon Field into our thinking, activity and creativity.

We experience the Tachyon Field with our senses, mind and spirit as a warm, pleasurable, energizing and healing sensation. Healers have learned to access the Tachyon Field's resources for its healing powers more successfully than the average person has. Belief in a "Higher Power" enables them to draw upon the Tachyon Field. The more they draw upon it, the more effective as healers they become. They often acknowledge they are simply channeling the Tachyon Field's resources into the everyday world. They know the resources are infinite, and freely available. Throughout history they have called this infinite resource by many names.

Tachyon Energy - The Creative Force of the Universe

While study of the electromagnetic interaction of all life may seem revolutionary, quantum physics has gone even farther. Experiments showing the reaction of plants to mental influences suggest that there are forces beyond the electromagnetic spectrum responsible for the interactions, for plants responded even when placed in a Faraday cage which blocked penetration of electromagnetic waves. (Tompkins and Bird, 11) Quantum physicists speculate that the force beyond the electromagnetic is something that has been given the name "Tachyon energy."

Tachyons are the theoretical source of subatomic particles, and the expansion of the tachyon field is speculated to be the creative force of the universe. Tachyon theory explains the instantaneous nature of psi phenomenon, which transcend Einstein's relativity theory that restricted the movement of energy in the universe to the speed of light. Tachyon theory postulates that there are actually two universes involved in creation: the visible, sub-light speed universe we are conscious of and an invisible, faster-than-light universe. This Tachyon energy is omnipresent, or exists holographically simultaneously everywhere because it travels faster than light, and hence takes no time to travel through space. (Takionic Products)

Tachyon energy is speculated to be the creative and sustaining force of all life, which requires a certain balance of energy to sustain itself. When a life form requires life energy, a vacuum is created and tachyon energy rushes in. The nervous system is viewed as a conductor for the absorption and processing of this energy. Energy healers are perhaps simply individuals whose sensitive or developed nervous systems make them more adept at manipulating or processing this energy. (Takionic Products) If tachyon energy is indeed the life force, then it is this force which may correspond to the vital energy of life called variously Chi by the people of China; bioplasma by Russian researchers; animal magnetism by Franz Mesmer, the father of hypnotism; orgone by Dr. Wilhelm Reich and the Force by Master Yoda and his disciples. Electromagnetic fields may prove to be merely the language through which this energy manifests and communicates.

While tachyon theory is at the frontier of physical research, there is now adequate knowledge regarding electromagnetic field interaction to explain energy healing. Tachyon energy is mentioned because there is always another layer of the onion to explore. I often visualize the galaxy from the outside the way humans may visualize a cell. Perhaps the planets are in some way similar to electrons orbiting an atomic nucleus (the sun). At the same time, the galaxy may be but an infinitesimal particle of say, a blade of

grass of a larger system, which may itself be but a tiny particle of another system, etc... If the macrocosm (from our perspective) mirrors the microcosm, then the microcosm in turn reflects the macrocosm. At the level of atomic particles there may exist many levels of energy and life too small for us to perceive. A proton may be an entire “world” filled with lifeforms similar to the world of the earth.

Increasing Your Subtle Energy

There are many traditional techniques that Westerners can use to increase their subtle energy. A personal favorite of mine is Kundalini Yoga, but others include mantra recitation, doing repeated prostrations, nearly any other form of yoga, Tai Chi, Chi Gong, tantric sex, certain types of visualizations, and many others. However, we are very fortunate now to also have access to devices that charge our bodies and our environs with increased subtle energy flows, which can help us develop our own awareness of subtle energy and also help more easily work through the denser energy blockages in our bodies and minds that bring us difficulty in life.

One of the most spiritually powerful, yet extremely subtle forms of energy generated by these new, hi-tech devices has been named ‘Tachyon Energy’ by its inventor. Tachyon energy is unique because it doesn’t have a fixed frequency or range of frequencies, but has instead been called ‘the source of all frequencies.’ It is an anti-entropic, organizing force that charges the subtle energy organizing fields that underlie our material reality and many levels of our spiritual reality, too. It brings energy from the energetic source of existence and channels it into our bodies, minds, and beings. These devices have profound effects, especially when used during meditation. During meditation, the mind, body, and subtle-energy bodies are able to absorb and utilize this energy, facilitating quantum leaps in spiritual growth and realization. This energy will help shake loose damaging patterns that have been embedded in your energy field over many, many years, and will help ‘illuminate’ your field and charge it with

energy, making you more conscious of your subtle-energy bodies' workings and natures.

In addition to its profound spiritual effects, Tachyon energy is also extremely healthy for the physical body. In scientific experiments, plants exposed to Tachyon energy grew faster and larger than those that weren't (by a factor of two to three), mice that were exposed to this energy on a continuous basis lived 40% longer than those that weren't, and cut flowers placed in Tachyonized water lived weeks longer than cut flowers placed in normal water. In people and animals, it is clear that exposure to this energy helps the body to heal, reduces pain, and generally improves quality of life.
